About the Tutorial

React toolchain provides lot of features out of the box. Some of the advantages of using Rea

```
    }
}
```

¶

```
return
```

```
<em>{this.props.category}</em></div>
                        </div>
                    );
```

```
            <tbody>
                {
```

```
                    </thead>
```

The general idea is not to overcomplicate the application logic and use advanced features

```
        <table onMouseOver={this.handleMouseOver}>
            <thead>
                <
```

```
    items.forEach((item, idx) => {
```

```
        </tbody>
    </table>
```

```
    <values>
```

state.

Material UI

React community provides a huge collection of advanced UI component framework.

```
    '&:nth-of-type(odd)': {
```

Re 0 JS

```
<script type=
```

```
});
```

```
</form>
</div>
```

- Expense add screen: Add interface to add an expense item

First, create a new react application, *react-router-app* using

```
        e.preventDefault();

        this.props.onDelete(id);
```

Deployment

Once the application is build, it can be deployed to any web s.32 d, it can be deploye/0.6(t)-r-69.3( )-

```
<body>
```

```
            }
        case
```
